

# Verizon Connect fleet data services

Amplify the potential of your fleet applications by leveraging the power of Verizon Connect. Easily integrate GPS location and vehicle diagnostics data into many third-party software applications, such as dispatching, fleet management and asset management, for a single, data-rich tool. Efficient, secure, and scalable, our Web and Data Connect integration services can help enhance the solutions you use to manage your business.

## Types of data accessible through data integration

- Customer (Web Services only) – name, address and vehicle list
- Vehicle – diagnostic alerts, MPG, odometer and idle time
- GPS – time-stamped latitude/longitude, speed, and ignition status

## Web Services

Web Services allows you to receive specific Verizon Connect data in third-party applications at preset time intervals. A simple, economical method for getting only the vehicle data you need.

## Data Connect Service

Data Connect Service replicates a continual stream of Verizon Connect data, allowing you to easily query and analyze persisted data within your third-party business applications. This enabled near real-time sharing of vehicle information.

	Web Services	Data Connect Service
